QuizProof

Learn web3, prove it on-chain with soulbound knowledge NFTs

The Problem & Our Solution

Web3 is intimidating for beginners, who lack a fun way to learn and prove their knowledge on-chain.

- Beginners find blockchain concepts confusing and hard to approach
- No easy way to track or verify learning progress in web3
- QuizProof turns learning into bite-sized quizzes across key topics
- Correct answers earn XP and level up users through knowledge tiers
- Soulbound NFTs mint as permanent, verifiable proof of what you know

How It Works

Users quiz, earn XP, and mint soulbound NFTs on Solana that certify their knowledge tier.

- Users pick a topic (history, tech, DeFi, NFTs, security) and answer questions
- Quiz answers and XP are tracked off-chain via Supabase for fast gameplay
- On level-up, an Anchor program mints a soulbound NFT tier badge on Solana
- Metaplex Core issues non-transferable NFTs as permanent credentials
- Public profile page shows earned NFTs and quiz stats, verifiable on-chain

Built with

Solana, Next.js, Solana Web3.js, Anchor, Metaplex Core (soulbound NFTs), Supabase, Phantom Wallet Adapter

Why Now & What's Next

Colosseum brings new users to Solana needing onboarding, and soulbound NFTs are emerging as credential primitives.

- Colosseum hackathon draws many web3 newcomers needing accessible learning tools
- Soulbound NFTs are gaining traction as on-chain credential primitives
- Roadmap: expand question bank through community submissions
- Roadmap: add multiplayer live quiz battles for competitive learning
- Roadmap: partner with Solana projects to sponsor topic-specific NFT badges
